#### Business Problem

Microsoft movies is looking to create original movie content that will see box office success. The main question that we're looking to answer this is:

What kind of movies should they create?

#### Data and Methods

There were two main datasets that were worked with which was:

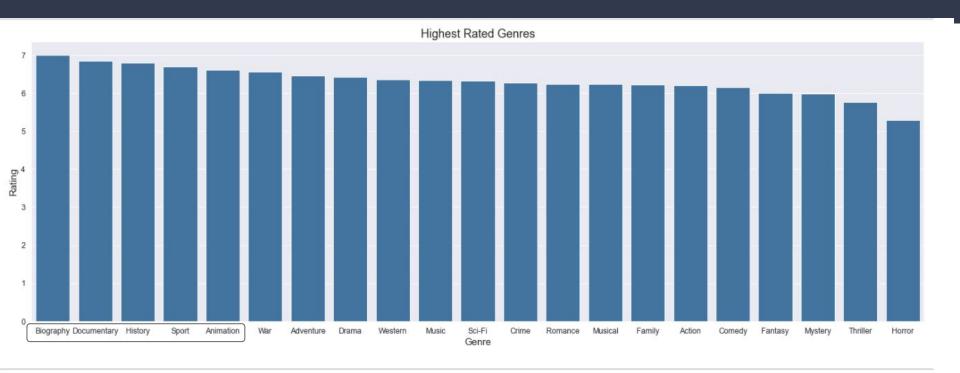

• IMDb movie database that included movie titles, genres, ratings, and directors

 TheNumbers csv included information on movie titles and production budgets, as well as an assortment of other pieces of data

The key metric that was a primary focus was rating

#### Conclusion

This analysis leads to three recommendations for the movies that should be created for Microsoft to do well in the original content space:

- Start with creating movies with the highest rated movie genres. If Microsoft starts with the top 5 highest rated genres, it would be: Biography, Documentary, History, Sport, and Animation.
- Choose the highest rated directors per genre. While there are a lot of different directors, some directors specialize in a particular genre.
- The highest budget does not always mean higher rated movies. It is better to know how much budget a particular genre spends as to not over exceed budgets too greatly or undercut budgets too harshly.

## Next Steps

Further analyses could yield additional insights to growth:

- Better budget projections
- Specified combinations in genres
- Budget / ratings ratios
